UNSINKABLE DOCK FLOATS

Individually-tested products, guaranteed for 15 years.

All parts are manufactured with from medium-density polyethylene, ensuring good resistance to stress cracking, toughness, and good resistance to impact at low temperature. The raw material used are virgin (from recycled), stabilised with anti-UV agents and coloured with black pigment to provide good resistance to ultraviolet radiation.

The floats are resistant to salt water, attacks from marine flora and fauna, wave impact, hydrocarbons, and the formation of static ice. Suitable for external use, these floats come with a 15-year guarantee.

All floats are available in a 'foam-filled' version: the interior of the float is filled with expanded polystyrene beads, forming a block which offers maximum cohesion; thanks to a reliable and effective expansion process.

Environment

A black plastic dock float is shown. It has a rectangular shape with a slightly raised top edge. A circular label is attached to the front, featuring the text "GARANTIE - GARANTIE - GARANTIE" around the perimeter and "15 ans" in the center. The float is shown in a perspective view, with another float visible behind it.
